

Ex 13 Experiment to handle missing values and inappropriate data in a given data set.

```
import pandas as pd
import numpy as np

data = {
    "Name": ["Asha", "Ravi", "Kumar", "Priya"],
    "Marks": [85, np.nan, 78, 150],
    "Age": [20, 21, np.nan, 19]
}

df = pd.DataFrame(data)

print("Original Data:")
print(df)

# Replace inappropriate marks
df.loc[df["Marks"] > 100, "Marks"] = np.nan

# Fill missing values with mean
df["Marks"] = df["Marks"].fillna(df["Marks"].mean())
df["Age"] = df["Age"].fillna(df["Age"].mean())

print("\nCleaned Data:")
print(df)
```

... Original Data:

	Name	Marks	Age
0	Asha	85.0	20.0
1	Ravi	NaN	21.0
2	Kumar	78.0	NaN
3	Priya	150.0	19.0

Cleaned Data:

	Name	Marks	Age
0	Asha	85.0	20.0
1	Ravi	81.5	21.0
2	Kumar	78.0	20.0
3	Priya	81.5	19.0
