

Ex 10 Experiment to understand array function in Data science.

```
import numpy as np

a = np.array([10, 20, 30, 40, 50])

print("Array:", a)
print("Sum:", np.sum(a))
print("Mean:", np.mean(a))
print("Maximum:", np.max(a))
print("Minimum:", np.min(a))
print("Standard Deviation:", np.std(a))
print("Sorted Array:", np.sort(a))

... Array: [10 20 30 40 50]
Sum: 150
Mean: 30.0
Maximum: 50
Minimum: 10
Standard Deviation: 14.142135623730951
Sorted Array: [10 20 30 40 50]
```
